the GRASSY KNOLL GAZETTE is published bi-monthly, with occasional dividends between, by CUTLER DESIGNS box 1465 Manchester MA 01944 ... $10/year, $12 overseas printed by Minuteman Press, Danvers, MA .. circ. ca 230 ca 85 complimentary

from Anita Gandolfo: **R.I.P.**

my husband, TED GANDOLFO, XII·30·30 - VII·2·92, tape master, JFK assassination, 6,000 hours ... Ted's historic 18-hr videotaped, 28-yr history of the JFK assassination and coverup is a master's magnum opus, rare, a collector's item .... send CHK/MO $50 to my new address:

857 Garfield ST, Franklin Square, NY, 11010 ....Thankyou.

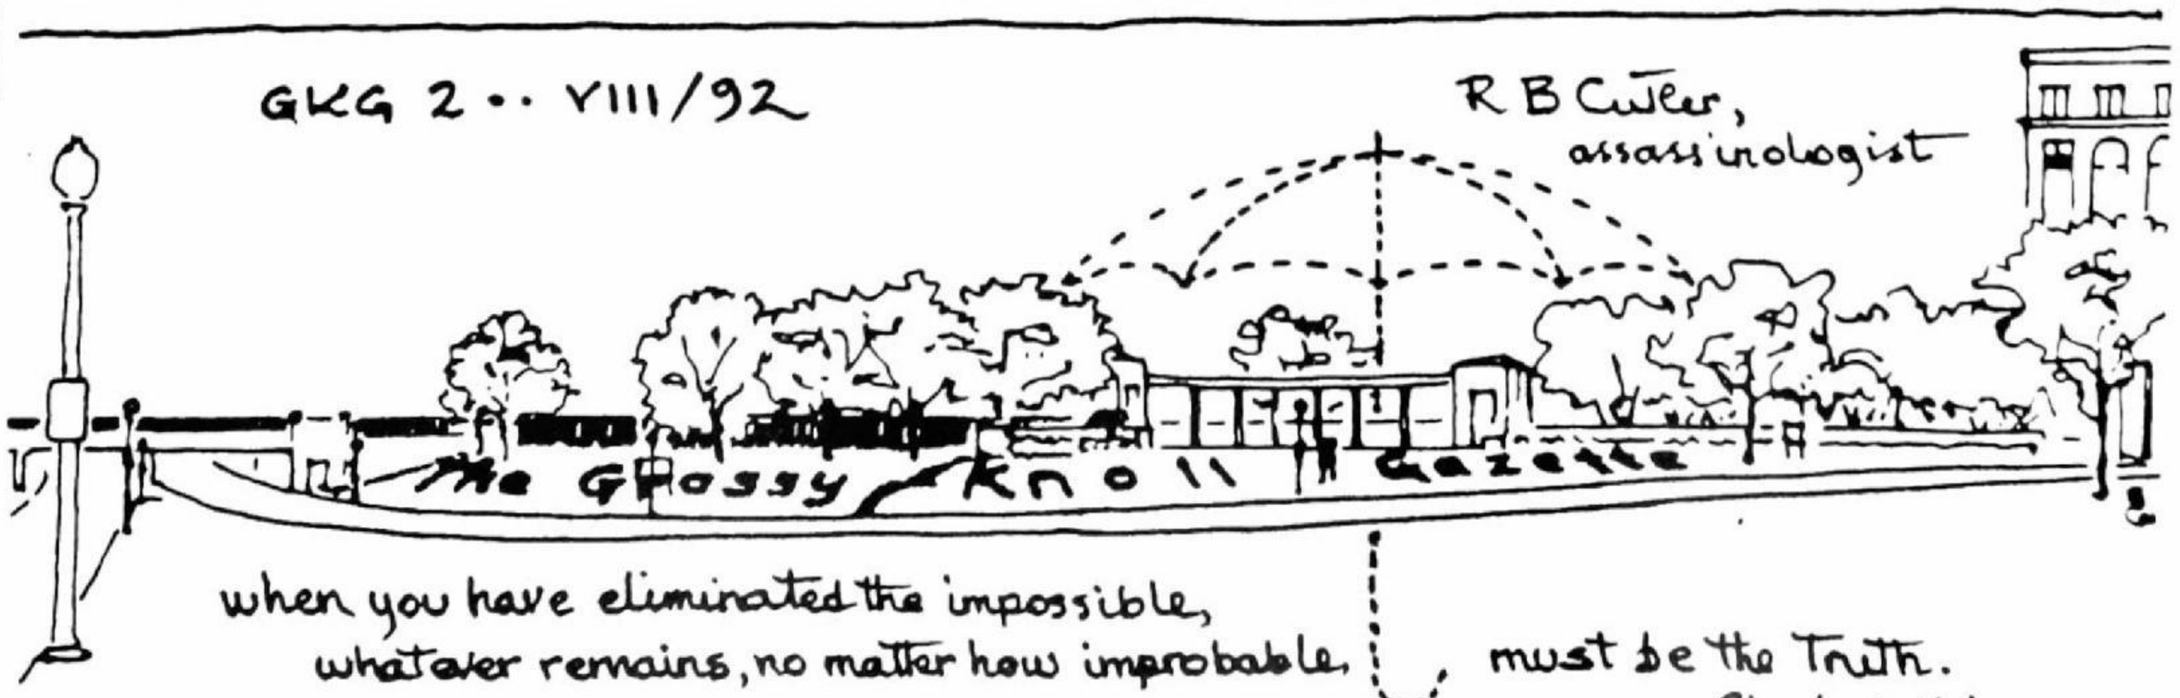
...and on the 27th of May, MAMA JAMA's BOYS BURST INTO TEARS.....

Mama reports 'J' as saying his autopsy sheet bullet holes didn't fit the clothing's holes because he and Jim didn't know the jacket was humped up when JFK was waving "...These errors were later exploited by the conspiracy crowd for thier own premises .... "

It was Exploitissimo John K Lattimer MD who humped the jacket up so CE 399 could track thru the neck at its downward angle of 23 degrees and not have to turn 32 degrees upward at entry to exit (my foot!) the throat at midline (your feet !) The Throat Wound of Entry is Bethesda's Blunder and Conspiracy-Coverup's funeral pyre.

Mama J, why don't you call Dr Perry and find out which cleaver he used to hack that 75mm x 35mm monstrosity everyone now passes off as a surgeon's tracheostomy? And ask the boys why they didn't sit JFK waving so they could track that Back Wound properly? Thencall Brent Scowcroft at the White House and ask him if the president still believes Oswald did it with his little Carcano....lottsa luck Mama.

GKG 2 .. VIII/92



when you have eliminated the impossible,
whatever remains, no matter how improbable, must be the Truth.
Sherlock Holmes

THE EMPIRE STRIKES OUT

TO : Editor JAMA, Journal American Medical Association.
FROM: Editor GKG, Grassy Knoll Gazette VI/1/92

At Large with Dennis L Breo, JAMA V/27/92, attempts to educate we truth-defamers by educting us with the truth. It needs to be laid out in lavender.

The so-called Bethesda/Parkland discrepancies have drowned the many, simple truths of 22 November, the truths recorded by those who saw and believed what at that moment was their own truth of the matter.

In Dallas, those personal truths stemmed from the experience of attending the President's death. The journalist, who writes that because no measurements or photgraphs were taken at Parkland, no doctors can make "meaningful" entry-exit wound evaluations, needs to re-think any physician's natural, professional reactions and then retreat from the high ground he thinks journalese occupies. [and stay there]

Part I : 22 November

Whatever the size and wherever located, the two wounds to the President's head must be matched with Z-312 thru Z-335, Itek's 1976 Report to CBS which found no evidence of a bullet having caused JFK's rearward motions and GKG IV/92 (Exhibit A) and GKG V/92 (Exhibit B) diagramming the impossibility of any shot from ahead of the limousine at Z-312 causing the rearward motions seen on Z-film.

The photos of the limousine speeding along Stemmons en route to Parkland with JFK's foot hanging out over the door, will give pause to those who must wonder what happened to the head from upright in Z-312 to supine on the gurney a few minutes later.

Six and a half hours later, another set of truths was set in motion in Maryland. Ordered to find the cause of death, two navy commanders and an army colonel found it to be, "gunshot wound, head." The entry wound was 15mm x 6mm, 2.5cm to the right of mid-line and just above the occipital protruberance, the exit wound 13cm (around), high on the head's rightside.

A third wound, one of entry, was located in the right superior, posterior thorax. A fourth wound, "about 3 to 4 centimeters around" was located in the anterior neck just above the Adam's apple. Even with neck muscle, trachea and pleura damage, an X-ray body search failed to find the neck-wounding bullet.

On this note of bewilderment, the truths of 22 November faded away into the wee-hour mists of the 23rd.

Each observer, having contributed first-hand, raw-data evidence of his beliefs, each one of these individual beliefs becomes an integral part of the truths of 22 November, the whole truth, nothing but the truth...so help us all.Fitting these individual beliefs into that whole-truth-and-nothing-but has sold a lot of newspapers, books →

and TV time. It's not over yet. [It's closer than you think]

Part II : 23 November and Beyond

Next morning the tracheostomy revelation from Dallas to Bethesda, handed the autopsy doctors a through-the-neck solution they couldn't resist. By allowing the tracheostomy incision to obliterate the missing bullet's exit wound, that let something out of Pandora's box and sullied their own cause-of-death finding. Incorporating this neck wound solution into their summary only compounded the matter's troubles:

> ... deceased died as a result or two perforating gunshot wounds inflicted by a high-velcity rifle fired by person or persons unknown .... from behind and somewhat above the level of the deceased ....
> (p 2799)

The surgeaon who could slash an "about 3 to 4 centimeters around" [75mm x 35mm] desecration of the body of the dying President of the United States is a rara avis indeed. For the autopsy doctors to believe a Parkland Hospital surgeon could thusly foul the President's body is beyond the pale. However, it fits Asst Commission Counsel Specter's mid-wifery of the first two ill-conceived wounds, of the seven in his Single-Bullet Theory, to a TEE. How many defamers does it take to show the doctors the light?

Six Dallas doctors told the world each had seen the 4-7mm diameter, neat, round hole in the President's throat. Today there are seven on whom identification of that wound as one of entry rests.

Too long have the truths of 22 November been scrambled together with the stuff that followed. [unscrambling comes from us truth-defamers]

There has never been any question of the Throat Wound of Entry. The Single-Bullet Theory is all theory (Exhibit C) and since 1971 this writer has espoused the Single Shot to the Head (Exhibit D) How about a 30-minute slide-lecture on the eight shots of Crossfire 92? or a JAMA reply by Breo?

sincerely (signed) B

A funny thing happened on the way out of market and PEOPLE ended up in the bag of groceries.

TO : The Editor of PEOPLE
FROM : The Editor of the Grassy Knoll Gazette

According to On Examining JFK by Dennis L Breo (VI/8/92 issue) two of the three autopsy doctors, James Humes and J Boswell, are "tired of being beaten upon by people who are supremely ignorant of the scientific facts of the President's death."

It may surprise the good doctors to learn that a small army of sleuths are equally tired of being beaten upon by the same kind of people →

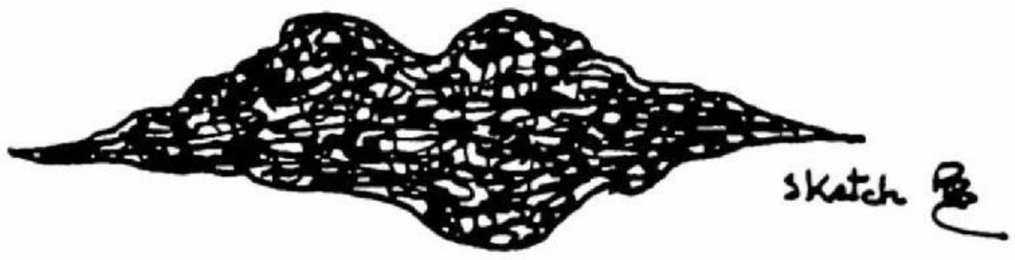
who have used the President's autopsy findings to conclude there was only one gunman firing in Dealey Plaza.

As of midnight XI/22/63, the autopsy doctors had found four (4) wounds on JFK's body :

1) an entrance wound in the back of the head
2) an exit wound in the top, front of the head
3) an entrance wound in the back of the lower neck
4) a gaping, three-inch, irregular wound in the front of the neck just below the Adam's apple.

Unable to find any bullets, number four had 'em buffalo-ed. They concluded the two head wounds and the neck entrance wound had been caused by bullets from a high-powered rifle.

Talking to Dr Perry next morning in Dallas, Humes learned of Perry's tracheostomy performed in Dallas. Humes then concluded the gaping, three-inch, irregular wound found at autopsy, was Dr Perry's tracheostomy. Humes further concluded the gaping, three-inch, irregular wound, #4, had obliterated the exit wound caused by the bullet that had entered the back of the neck.



Wound #4, actual size
ask your doctor if this is a normal tracheostomy ?

Doctors Humes and Boswell (Finck should be included) deserve to be beaten upon soundly and forever.

1) The assumption that only one rifle's bullets had caused the two observed entrance wounds defies science, logic and common sense. By chance did they hear J Edgar Hoover's blather about no conspiracy / lone assassin ?

2) The assumption that the gaping, three-inch, irregular wound, a gash in the President's throat, was a tracheostomy defies medical science and practice, logic and common sense.

3) The assumption of an exit wound obliterated by the gaping, three-inch, irregular gash/tracheostomy contradicts Dr Perry and five other doctors who observed the President's Throat Wound less than ten minutes after it was inflicted in Dealey Plaza: 4 - 7mm in diameter, clean, neat, round, a puncture wound, a wound of entry.

4) The assumption that the two neck wounds were connected allows Humes, Boswell and Finck to drape the mantle of conception over themselves for the first leg of the magic bullet's flightpath. Arlen Specter's mid-wifery brought it into the world eleven months later, complete with five more wounds to the Governor of Texas.

Four assumptions, each of them lacking the basic thinking that was →

THE EMPIRE STRIKES OUT TWICE.

expected of even young, inexperienced doctors, have allowed promoters of the Lone Assassin Myth dominance of the media for too damn long. CE 399's single-bullet escapade must be let out to pasture so it can quietly fade away.

With GHWB still able to back Oswald as the assassin, don't bet the ranch.

sincerely (signed) BE ▼

THE DOCTOR and THE DRAGON

Since Crossfire 75 (TUM, 202) the President's Throat Wound has been caused by La Flechette, launched from the grassy knoll ahead of the limousine. Specter, Belin, Media & Company Ltd to the contrary, anyone coming close to confirming that fact is invited to join the fun and games just ahead; tonight it's mimosas on the house.

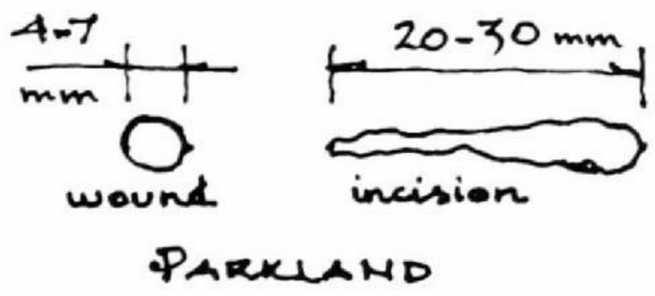
In Conspiracy of Silence, Charles A Crenshaw, MD comes forward as #7 on our list identifying this wound as one of entry.

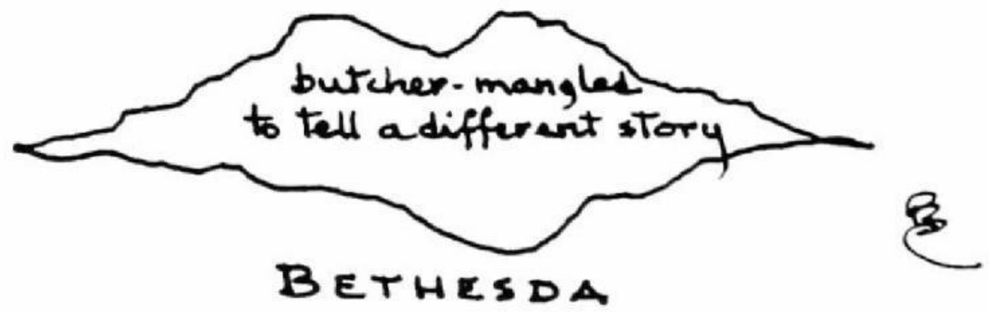
...the opening in the President's throat was one of entry ..(p 164)

...Dr Perry made a small incision ...(p 85)

(GKG VIII/81, reviewing David Lifton's BE : ...I asked Dr Perry how large the incision was? ... Two to three centimeters (20 to 30 mm) he replied ..... GKG IV/87 : ...at Bethesda's pre-autopsy X-ray and surgery, someone (with pliers ?) extracted La Flechette and left a gaping, irregular gash almost 75mm (3") wide ....)

...the incision Perry had made at Parkland for the tracheostomy had been enlarged and mangled as if someone had conducted another procedure; it looked to be the work of a butcher. No doubt someone had gone to a great deal of trouble to show a different story than the one we had seen at Parkland ...(p 111)





Dr Charles A Crenshaw stands apart from those slide past this dragon mumbling, "...not much different from what I remember"..."tracheostomy looks fine to me ...." From the depths of his silence he has given vent to his professional outrage on being shown an autopsy photo of the Throat Wound, a violation of one of his truths of 22 November.

Perhaps he is not surprised to find himself so close to the truth, that dragon so friendly to those who stop, listen and pat.

Gentle reader, if you do nothing else, re-read the page 111 quote.

VERITAS & THE GRASSY KNOLL DIVERSION

For those who glaze at the complexity of GKG's sketch-diagrams, this one is on the last, the easiest-ignored page. A variation on the one-shot-to-the-head theme, its spoof will help you laugh-off your gut-feeling-instinctive-reaction-woman's-intuition that insists on a shot to the head from the front. That fiction buckles under Veritas.

1) The head is turned 34 degrees to its left and tilted downward 39 degrees. (GKG V & VI/92)

2) The head's transverse center-line is two degrees to the left of the flightpath of a bullet from the corner of the fence. That flightpath is 8 degrees to the right of Badgeman's bullet and 7 degrees to the left of Roscoe's bullet.

3) None of these three bullets can create the head-snap seen in Z-film, leave the head's leftside undamaged or exit the head's rear, low rightside (a must for some researchers)

4) These three bullets, entering at right angles to the head, can only exit and damage the head's leftside, thereby moving it across not back along the length of the limousine.

5) Flightpath WS, #8 is at 7 degrees to the left of the head's longitudinal centerline. Its bullet from above and behind (TSBD's window VI #14) enters 2.5 cm off-center to the right, at a downward angle of ~~25~~ 20 degrees.

6) Transferring its momentum tangentally above the occipital protruberance, the bullet, taking the top, right side of the head away, moves it forward 2.3 inches and fragments exiting. One fragment scars the windshield; another wounds JBC's left thigh.

7) The equal and opposite reaction to the head's force snaps it back, leaving the leftside undamaged, the cranial plates loosened.

8) Three degrees is Elm's slope downward. Five degrees is the downward declination of the three bullets' flightpaths from behind the fence.

9) Other factors, the limousine's forward motion, JBK's push-away, the backbrace, neurological responses, the jet-effect of the majority of the material exiting spherically, all contribute to the head's double, fore-and-aft motion discovered in 1966.

So much for Veritas.

If spelled out, the spoof's spoofiness spoofs-off. It's all in the box to the right: grains of truth amongst the sands of ridicule.

If still you find it impossible to laugh-off this impossible shot to the head from the grassy knoll ... 1) it's not necessary to have it to spell Conspiracy and 2) best help RMN : throw in your own sink; it's clogged up and causing the heat in your kitchen.

SUCCESS IS ATTENTION TO DETAIL.....
